

Alert / Incident Investigation Record

Field	Value
Incident ID	[To Be Assigned]
Alert Title	Large outbound transfer to suspicious IP
Date Raised	2024-03-01
Date Closed	[Pending]
Lead Analyst	[To Be Assigned]
Severity	Critical / High / Medium / Low
Status	Open / In Progress / Closed / False Positive
Classification	True Positive / False Positive / Benign True Positive (Pending Investigation)

Alert Details

Field	Value
Alert Name / Rule	Data Exfiltration Alert (derived from category)
Splunk Index	[Not provided in log]
Source / Source type	firewall
Host	FW01
Timestamp (UTC)	2024-03-01T09:30:00.000+0000
Event Code	[Not provided in log]

Source IP	10.0.2.15 (<i>src_port: 57026</i>)
Destination IP	185.56.80.65 (<i>dest_port: 443 / HTTPS</i>)
User / Account	<i>[Not provided in log]</i>
Category	data exfiltration

Additional Alert Details

Field	Value
Action (allowed/blocked)	allowed
MITRE Technique	T1048 - Exfiltration Over Alternative Protocol
Malware Family (if known)	<i>[Unknown]</i>

Analyst Triage Notes / Next Steps:

- **IOC Identified:** Destination IP 185.56.80.65 is flagged as suspicious.
- **Exfiltration Confirmed:** The firewall allowed a massive outbound transfer over HTTPS. bytes out is **348,057,956 bytes (approx. 348 MB)**, while bytes in is exceptionally small (3,828 bytes), which perfectly aligns with data exfiltration behaviour rather than standard web browsing or downloading.
- **Immediate Action Required:** Because the action was "allowed" and the severity is "critical", containment (Phase 4 of the template) should be initiated to isolate host 10.0.2.15 and block the IOC IP 185.56.80.65 on the perimeter firewall.
